DETAILED ACTION

1. Claims 21-40 are pending in the application.
2. Applicant's election with traverse of Group I (claims 21-27 in Paper No. 5 is acknowledged. The traversal is on the ground(s) that any search for the species embodied in claims 21-27 would necessarily include a search of the species embodied in claims 28-40. Thus, a simultaneous search for both species would not constitute an unreasonable search for the Patent Examiner. This is not found persuasive because prior art that would anticipate or render obvious the invention of claims 21-27 would not necessarily anticipate or render obvious the invention of claims 28-40, thus causing an undue burden of search.

The requirement is still deemed proper and is therefore made FINAL.

Claims 28-40 are withdrawn from further consideration pursuant to 37 CFR 1.142(b), as being drawn to a nonelected invention, there being no allowable generic or linking claim. Applicant timely traversed the restriction (election) requirement in Paper No. 5.

Priority

Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

Information Disclosure Statement

The information disclosure statement, filed 09/12/01, complies with the provisions of 37 CFR 1.97, 1.98 and MPEP02 § 609. It has been placed in the application file, and the information referred to therein has been considered as to the merits.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claim 21-27 are rejected under 35 U.S.C. 102(b) as being anticipated Rechmeier {EP 471987; abstract only}.

Rechmeier discloses a method for producing 1,2-dichloroethane, using a circulating reaction medium and a catalyst, wherein chlorine is dissolved in the circulation reaction medium and ethylene is introduced into the reaction medium (containing 1,2-dichloroethane) in order to produce gas bubbles with a diameter of 2.0mm (especially below 1.5mm). The temperature and pressure of the reaction zone is at 75 to 200 C and 1-15 bar, respectively. The dwelling time of the reaction mixture is from 2.5 to 25 seconds (see abstract).
